

The Company **COMELIT GROUP SPA** with headquarters in
via Don Arrigoni,5 - 24020 Rovetta S. Lorenzo - Bergamo - Italia

HEREBY DECLARES

under the terms of its responsibility

To understand the importance of Ecodesign and Circular Economy in order to support a sustainable economic model by a design based on the efficient use of resources and materials and by intervening on durability, reparability, possibility of updating and recyclability of the products themselves.

Comelit Group SPA knows the principles of eco-design apply to all phases of the product life cycle, with the aim of reducing the overall environmental impact: from the procurement and use of raw materials, which should be reusable, biodegradable, recyclable and non-toxic, to their processing in the production process and to distribution, which must comply with the EU directive on Ecodesign (Directive 2009/125/CE), in terms of energy efficiency (energy consumption in the production phase) and reduction of environmental impact. Furthermore, the life cycle of the product can be extended as much as possible, by recycling and / or reusing its components, with the aim of reducing waste to a minimum.

Thanks to the LCA (Life Cycle Assessment) methodology, Comelit Group SPA establishes the phases of pre-production, production, distribution, use and final disposal and it is aware of the importance of a new environmental policy approach, starting from a new circular economy package, sharing the efforts that the European Union is going to adopt regarding proper waste management and every action for the prevention of all litter, in particular for plastic waste to ensure that all plastic packaging is recyclable by 2030.
